

Effecta Lambda 35 kW

Modern and convenient

We are proud to present our wood gasification boiler **Effecta Lambda**. A boiler that can manage more things than you usually see in a log boiler.

How does it work

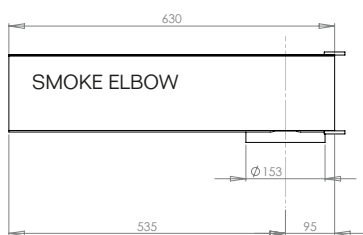

Anyone who has been using logs to burn, knows that it might be a bit tricky to get the combustion and efficiency to the highest level. The logs should not be too moist and be homogenous etc. **Effecta Lambda** simplifies your woodfiring substantially, because the boiler itself knows how the combustion is running with the assistance of a lambda sensor in the flue gas channel. The air inlet dampers on the front of the boiler are optimised with motors to give you the best combustion and highest efficiency possible.

Lambda sensor

The lambda control gives the user an additional aid for a comfortable and trouble free heating system. The clean control panel is easy to use, and you can view different temperatures and also a calculated degree of efficiency. In contrast to many other products on the market, the boiler is complete and assembled in the factory. This means lower installation costs for the end customer.
