CLEARANCES

The clearances listed below are Minimum distances unless otherwise stated:

Clearance:	Dimension	Measured From:
A: Mantel Height (min.)	13" (330mm)	Top of Fireplace Opening
B: Sidewall (on one side)	8" (203mm)	Side of Fireplace Opening
C: Ceiling (room and/or alcove)	22" (559mm)	Top of Fireplace Opening
D: Mantel Depth (max.)	12" (330mm)	21-1/2" Above Fireplace Opening
E: Alcove Width	84" (2134mm)	Sidewall to Sidewall (Minimum)
F: Alcove Depth	36" (914mm)	Front to Back Wall (Maximum)
G: Finished Floor	25-1/4" (654mm)	Top of Fireplace Opening
Note	0" (0mm)	No Hearth Required

MANTEL LEG CLEARANCES

Combustible mantel leg clearances as per diagram:

Horizontal venting clearance requirements are shown.

If Vertically venting add 2" due to the adapter and venting pushing the unit away from the wall.

Clearance to 1-1/2" mantel leg increases to 9"

Clearance to 4" mantel leg increases to 13"

Clearance to a 7" mantel leg increases to 16"

Important

Determine the wall thickness prior to framing this unit. The finished wall depending on thickness would decrease the required clearance of 7" or 9" depending if this is horizontally vented or vertically vented so thought must be put into the framing details.

If the finished wall is 1/2 inch the framing should be 1/2 inch deeper to accommodate the finished wall

MANTEL CLEARANCES

Due to the extreme heat this fireplace emits, the mantel clearances are critical. Combustible mantel clearances from top of front facing are shown in the diagram on the right.

Note: A non-combustible mantel may be installed at a lower height if the framing is made of metal studs covered with a non-combustible board.

Note: Ensure the paint that is used on the mantel and the facing is "High Quality" or the paint may discolour.

VENTING ARRANGEMENTS

ALLOWABLE HORIZONTAL TERMINATIONS FOR HZ42 ST

The diagram shows all allowable combinations of vertical runs with horizontal terminations, using one 45° and one 90° (two 45° elbows equal to one 90°) for direct horizontal runs with horizontal termination use only one 45° elbow.

Note: Must use optional rigid pipe adapter (Part# 510-994) when using Rigid Pipe Venting Systems.

VENT RESTRICTOR SETTING:

Vent restrictor factory set, no adjustment required unless otherwise indicated.

Refer to the "Vent Restrictor Position" section for details on how to change the vent restrictor from the factory setting of Set 0 to Set 1 or Set 2 if required.

Note: Regency® Direct Vent System (Flex) is only approved for horizontal terminations.

- Maintain clearances to combustibles as listed in "Clearances" section
- Horizontal vent must be supported every 3 feet.
- Firestops are required at each floor level and whenever passing through a wall.
- A wall thimble is mandatory for all horizontal terminations due to high temperatures.

ALLOWABLE VERTICAL TERMINATIONS FOR HZ42 ST

The shaded area in the diagram shows all allowable combinations of straight vertical and offset to vertical terminations, using two 90° elbows, with **Rigid Pipe Venting Systems** for Natural Gas. Two 45° elbows equal to one 90° elbow. Maximum of four 45° elbows allowed.

**Please note
min. 1 foot
between 90°
elbows is
required.**

- Vent must be supported at offsets.
- Firestops are required at each floor level and whenever passing through a wall.
- Maintain clearances to combustibles as listed in the "Clearances" section.
- Refer to the "Vent Restrictor Position" section for details on how to change the vent restrictor from Set 1 to Set 2 or Set 3 if required.

Note: Must use optional flue adaptor when using Rigid Pipe (Part # 510-994..

HORIZONTAL TERMINATIONS RIGID PIPE 4" X 6-5/8"

The diagrams below shows examples of horizontal termination arrangements using one, two, or three 90° elbows (two 45° elbows equal one 90° elbow)

- 1) A maximum of three 90° elbows are permitted (not including the starting 45° elbow at the flue collar when using rigid venting).
 - 2) Minimum distance between elbows is 1 ft. (305mm).
- Maintain clearances to combustibles as listed in the "Clearances" section.
 - Horizontal vent must be supported every 3 feet.
 - Firestops are required at each floor level and whenever passing through a wall.
 - Must use optional rigid pipe adaptor (Part# 510-994) when using rigid pipe vent systems.
 - A vent guard should be used whenever the termination is lower than the specified minimum or as per local codes.
 - Flex system can only be used up to 10 feet - otherwise rigid venting must be used.
