GRAVITY FED
COAL BURNING STOVE

KEEPING YOU WARM
for more than 30 years

EZ FLO
COAL

MAINTENANCE-FREE:

There are no moving parts in the E-Z Flo™ feed system. It requires no electricity to burn. This keeps the unit burning even in the event of a power outage. It uses anthracite nut or pea size coal, which is gravity-fed directly into the fire. Heavy cast iron shaker grates and a removable ash pan makes for easy ash removal.

SAVINGS:

Coal is one of the cheapest, most abundant fuels on the planet. The clean-burning anthracite coal, for which the Hitzer E-Z Flo™ is designed, helps save the planet's environment too. Anthracite coal is rich in clean-burning carbon but low in pollution-causing sulfur, dust and ash. "Nut" or "pea" sized coal is readily available in clean, easy-to-store 40 lb. bags. Anthracite produces more heat per dollar than virtually any other fuel.

WARMTH:

Anthracite coal burns hot but slow, radiating smooth, even warmth to every corner. Comfort that you can control with Hitzer's unique bi-metal thermostat. It has hours of heat stored up in the hopper. The optional distribution blower is great for circulating the heat to every area of the house.

BEAUTY:

The Swiss Amish craftsmanship of the E-Z Flo™ stoves adds charm to any decor, and the warm glow in the full-view window is a peaceful treat for the eyes and mind. Choose from black, forrest green, metallic blue, charcoal, or honey-glo brown to compliment your room's color scheme. We offer only a few options • a gold plated door or pewter plated door • gold or pewter accents (handles and knobs).

In Swiss, Hitzer means "heater". More importantly, Hitzer has come to mean quality, comfort, efficiency, value... and a commitment backed by superior Amish craftsmanship that provides you with years of heating performance.
