Fireplace Finishes

Mantels And Trim

Vertical installation clearances to combustible mantels vary according to the depth of the mantel. The figure below details these required clearances. Mantels constructed of non-combustible materials may be installed at any height above the appliance opening, however, do not allow anything to hang below the eyebrow.

Three mantels are shown (dark gray elongated rectangles) - one, 1 1/2 in. long at a min. of 8 in. above the fireplace opening; the second, 8 in. long at a min. of 12 in. above the fireplace opening; and the third, 12 in. long at a min. of 14 1/2 in. above the fireplace opening; for any mantels between these three in length, they must be located within the lighter gray shaded area.

Wall Details

A combustible mantel shelf projecting a maximum of 12" from the wall may be installed a minimum distance of 12" from the top of the firebox opening.

Note: Combustible wall finish materials and/or surround materials must not be allowed to encroach the area defined by the appliance front face (black sheet metal). Never allow combustible materials to be positioned in front of or overlapping the appliance front face.
