Clearances

Unless otherwise stated the clearances listed below are Minimum distances to combustible materials. **Please Note: A major cause of chimney related fires is due to a failure to maintain required clearances (air space) to combustible materials. It is of the greatest importance that this fireplace and vent system be installed only in accordance with these instructions.**

VENTING

THE APPLIANCE MUST NOT BE CONNECTED TO A CHIMNEY FLUE SERVING A SEPARATE SOLID FUEL BURNING APPLIANCE.

This appliance is designed to be attached to two 3" (76mm) co-linear aluminium flex running the full length of the chimney. The flue length must be a minimum length of 8' (2.44m) and a maximum of 35' (10.7m). See chart above for minimum distances from roof. Periodically check that the vent is unrestricted.

Masonry chimneys may take various contours which the flexible liner will accommodate. However, **keep the flexible liner as straight as possible**, avoid unnecessary bending.

Part #	Description
948-305	3" Flex - 35 ft.
946-529	FPI Co-linear DV Vertical Termination Cap

Alternate Approved Caps

46DVA-VC	Vertical Termination Cap
46DVA-VCH	High Wind Cap
46DVA-GK	3" Co-linear Adaptor with flashing

In areas of consistently high winds, we recommend using the Simpson Dura-Vent System (46DVA-GK adapter and 46DVA-VCH high-wind cap).

The Air Intake pipe must be attached to the inlet air collar of the termination cap.

Important:

Air Deflector (Part #420-119) is required for all LP installations. For Natural Gas installations -the air deflector is required when venting is a minimum of 15ft to a maximum of 35ft. Not required on NG if venting is between 8ft. to 14.99ft

Install the rear air deflector to the back wall of the firebox using 2 existing lower 1/4" screws.
